FUTURERETRO

Zillion Addendum

Your Zillion sequencer has a brand new feature not mentioned in the owner's manual. We have now added **RND**, or random, as a possible source for the Melody, Rhythm, Velocity, and Theme modes.

By selecting RND as a source, a random logic generator can be used to inject random variations into the selected parameter. If multiple instances of RND are used, the random logic value will be the same for all sources set to RND.

This feature, although simple as it may seem, adds an incredible amount new possibilities for endless hours of inspiration.

Enjoy!

Zillion V1.02 New Features

OS V1.02 adds four new selections for the MIDI OUT channel. These include VL1, VL2, THM, and RND.

VL1 allows the Velocity part to determine the MIDI OUT channel, while sending note velocity values of 127.

VL2 will allow the Velocity part to determine both velocity value and the MIDI OUT channel.

THM allows the Theme part to determine the MIDI OUT channel.

RND allows a random number from 1-16 to determine the MIDI OUT channel.

These new features can be extremely useful when controlling multi-timbral sound modules.
